SOFTWARE DEVELOPER

Description
Job ID: SD081325

Job Title: SOFTWARE DEVELOPER

Job Duties: Design, develop, and maintain cloud infrastructure using Terraform on AWS, Azure, and GCP. Manage VPCs, subnets, security groups, and IAM roles to ensure secure and scalable environments. Implement CI/CD pipelines using GitHub Actions for automated deployments and infrastructure management. Deploy containerized applications on Azure Kubernetes Service (AKS) and integrate with Azure DevOps for

continuous monitoring and scaling. Automate provisioning, configuration, and data migration using tools like AWS CloudFormation and Azure Bicep. Collaborate with cross-functional teams to analyze requirements, recommend solutions, and ensure system reliability and performance.

Requirements: Masters or foreign equivalent in Computer Science/Applications/ CIS, Engineering, Information Technology, Business Administration or related field with 24 Months of experience OR bachelor's in computer science/applications/ CIS, Engineering, Information Technology, Business Administration or related field with 60 Months of experience. Must be able to travel temporarily to client sites throughout the U.S. with expenses paid by the employer.

Hours: 40/week, Mon. to Fri., 9:00AM to 5:00PM

Offered Salary: $138486.00 Yearly
